# Special: Is the DAX tracking the US stock market's record run?

Analysts: Wolfgang Donie // Tobias Basse

## A look at the European stock markets

The stock markets in Germany and Europe – and particularly the DAX – registered an extremely dynamic start to 2025. At its peak in the first quarter, the German blue-chip index was up 17.6 percent. Initial drivers included some signs of economic stabilization, a reporting season that was, at the very least, free of major disappointments, and more attractive valuations compared to the U.S. This was compounded by greater unity within the EU following the political paradigm shift in Washington, along with the prospect of massive investments in infrastructure and defence. U.S. stocks lagged significantly behind. In early April, President Trump's tariff threats escalated, sentiment soured, and the year-to-date gains were erased. Following these disruptions, which also affected bond markets, the White House suspended certain tariffs. The stock markets recovered again, in keeping with the motto: surely things won't be all that bad. The market now began betting on near-term trade deals. Boosted by front-loading effects in foreign trade with the U.S., economic growth in the first quarter proved robust, not only in Germany. On July 9, the DAX hit a new all-time high of 24,549.56 points. Since then, the index of German blue chips has been moving within a volatile sideways channel, which has so far found a lower boundary around the 23,300-point mark. Uncertainties regarding future U.S. trade policy, along with various geopolitical hotspots, are taking their toll. The MDAX, which is more focused on the German domestic market, has performed almost as well year-to-date, albeit with higher volatility and a greater dependence on economic news from Germany.

Chart: DAX and MDAX

Sources: Macrobond, NORD/LB Research

## What's next for the DAX and MDAX?

We are maintaining our expectation of a moderately positive trajectory for the DAX. This outlook is based on the ongoing solid growth of the global economy (the DAX is broadly diversified internationally), expectations for an economic recovery in Germany and Europe in the years ahead, and valuations that remain more attractive compared to the U.S. stock markets. Our forecast for year-end 2025 stands at 24,200 points, which would equate to an annual performance of 21.6 percent. Looking at the next 12 months, we currently see the German benchmark index reaching a level of 26,000 points. Medium to long term, the slightly more attractively valued MDAX could even modestly outperform the DAX, depending on a pickup in the German economy. Our forecasts see levels of 30,800 points by year-end 2025 and 33,800 over the 12-month horizon.

### **A look at the international stock markets**

The recent record-breaking rally on U.S. stock markets – which appears to have lifted dividend stocks in other regions as well – is largely being driven by investor hopes for further interest rate cuts by the U.S. central bank. The FOMC recently announced its first key-rate cut of 2025, and investors are now betting on additional monetary policy measures aimed at cautiously bolstering the North American economy. The U.S. employment situation appears to justify further cuts in the Fed funds target rate. That said, the inflation trajectory in the United States will likely to a great extent limit the scope for aggressive rate cuts by the FOMC. Consequently, the new local minimum for the Fed funds target rate may not be reached until the second half of 2026. In his first official speech following the post-FOMC meeting press conference, Fed Chair Jerome Powell refrained from sending unambiguously clear signals regarding the central bank's future plans, prompting a degree of nervousness in the stock markets. All in all, the future course of monetary policy in Washington is at any rate likely to be broadly supportive of the global stock markets. In Japan, the central bank likewise plays a significant role for the Tokyo stock exchange. The unexpected announcement of plans to scale back the Bank of Japan's holdings of ETFs and REITs initially unsettled the Japanese stock market. However, the central bank's governor, Kazuo Ueda, emphasized that the policymakers in Tokyo intend to proceed with extreme caution in this area. This approach likely also applies to the potential interest rate hikes now looming as well, against which background really strong monetary headwinds for the Japanese stock market appear to be a not very likely scenario.

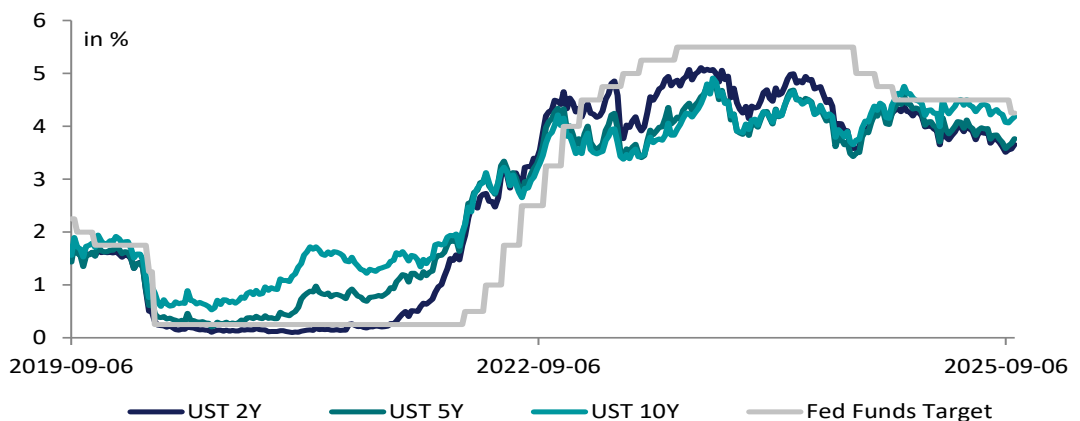

# USA: Further rate cuts ahead!

Analysts: Tobias Basse // Constantin Lürer

## After the strong growth figures

As is widely recognized in the meantime, the strong growth figures for Q2 were distorted to some extent by the very factors that had posed significant headwinds at the start of 2025 (now, of course, operating in the opposite direction). Consequently, a marked slowdown in growth is in our view to be expected in the second half of the year. At least in the short term, the significantly shifted course of U.S. economic policy is now likely to gradually start putting more sand in the gears of the American economy. Indeed, we anticipate a clearly slower pace of growth as early as Q3. That said, the Atlanta Fed's GDPNow indicator is not currently signalling such a scenario, instead indicating essentially unchanged strong growth rates for now. Against this background our current perspective on the U.S. economy may well be somewhat too sceptical. Of course, this is more a matter of nuance, however – especially when factoring in the considerable political uncertainty prevailing in Washington. We do not forecast a recession for 2025 (and have not done so in the past); we merely anticipate weaker growth in the second half of the year.

Chart: Interest rates in the USA

Sources: Macrobond, NORD/LB Macro Research

## U.S. consumer still a mainstay of North America's economy

August saw notable month-on-month expansion of 0.6 percent in U.S. retail sales – news that comes a surprise on the upside. Given the strong gains already registered in the two preceding months, describing the latest figures as genuinely robust would hardly be a sign of excessive optimism. The control group of retail sales, a component of some importance for the U.S. GDP, posted a pleasing month-on-month growth rate of 0.7 percent in August. The consumer thus remains a mainstay of the economy of the United States, North America and the world. Consumer sentiment has recently deteriorated again, however. The fear of job loss appears to be hovering like a sword of Damocles over the financial situation of many U.S. households.

## Further rate cuts ahead!

Jerome Powell used the Fed conference in Jackson Hole as occasion to send clear signals indicating forthcoming U.S. interest rate cuts. The first small step downward has in the meantime been taken. The favourable retail sales data for August have likely curtailed discussions regarding the magnitude of the rate cut to be implemented in the immediate term. New Fed governor Stephen Miran was alone in pressing for a "jumbo-sized" cut. Consequently, the upper limit of the Fed funds target rate now stands at 4.25 percent. Additional cuts are likely to follow, and we anticipate further key-rate reductions totalling 50 basis points over the course of 2025. The employment situation in the US has now moved more

decisively into the Fed's focus. While inflation trends in the United States are likely to prevent the FOMC from delivering aggressive rate cuts in the near term – consumer prices in the land of the free are indeed expected to rise noticeably – signs of easing on the macroeconomic inflation front should begin to emerge in the second half of 2026. This could ultimately pave the way for a reduction in the upper bound of the Fed Funds target rate to 3.00 percent. U.S. long-term interest rates also warrant close investor attention, particularly given their relevance to sectors such as the real estate market. The yield on 10-year Treasuries has edged slightly higher and now stands just above the 4.10 percent level. Significant concerns in global bond markets as to the Federal Reserve's independence would likely drive long-end yields markedly higher.

# Euroland: France in crisis, ECB dampens expectations

Analysts: Christian Lips, Chief Economist // Valentin Jansen

## Budget dispute in France: deadlock instead of fiscal consolidation

Following the failure of the austerity budget and the fall of Prime Minister Bayrou, President Macron decided to appoint Sébastien Lecornu as the fifth prime minister in just two years. Once again, the focus is on the strained budgetary situation. The budget deficit remains at an unhealthy level, projected at approximately 5.5 percent of GDP, while public debt already stands at around 114 percent of GDP. The ambitious austerity pursued by Lecornu's predecessor, Bayrou, which envisaged planned savings of €44 billion, failed due to resistance in the National Assembly. Like his predecessors, Lecornu now faces the task of securing workable majorities for the budget. This is unlikely to succeed without concessions to the Socialists – such as higher social spending or tax increases – or to the conservative Républicains, who demand spending discipline. Against this backdrop, concrete steps towards serious fiscal consolidation in France have once again remain elusive.

Chart: Cumulative change in yield on 10Y government bonds

Sources: Macrobond, NORD/LB Macro Research

## Markets and rating agencies gradually losing patience with France's politics

The yield spread of 10-year French OATs over German Bunds has widened noticeably since mid-August amid the ongoing political crisis. However, the Bund spread remained just short of its previous record peak from December 2024, when the preceding government crisis reached its climax. Market participants had quite evidently priced in the change of government in advance but were not anticipating a further escalation.

The grounds for the crisis are of a purely idiosyncratic nature, and the market reactions, too, have remained clearly confined to France. Potential spillover effects have not only failed to materialize; since Macron's near-disruptive decision to call snap elections in the summer of 2024, yield spreads between many countries and France have narrowed significantly. While 10-year Italian BTPs are yielding slightly less than at the start of 2024, French OATs have seen an increase of nearly one percentage point over the same period. The persistent political crisis is thus intensifying the pressure for fiscal action. Rating agencies, too, are gradually losing patience with France, given its lack of political capacity to act. Fitch, for example, has already downgraded France's credit rating from AA- to A+. It would be hardly surprising should other rating agencies follow suit. In September, the ECB made its customary reference to the TPI instrument. However, its activation is envisaged only in the case of unjustified, disorderly market dynamics that disrupt the monetary policy transmission mechanism. This cannot be said to apply in the current situation.

### ECB: No rate cuts for now – Lagarde declares disinflationary process over

In September, the ECB left key interest rates unchanged, as expected. The central bank's decision to hold rates steady is understandable, as current macroeconomic data exert no immediate pressure to act from either an inflation or growth perspective. The adjustments to its projections were accordingly of a minor nature. The ECB now expects inflation of 2.1 percent (2025), 1.7 percent (2026), and 1.9 percent (2027). Its economic growth forecast for the current year was also revised slightly upwards, to 1.2 percent. However, the medium-term growth outlook is now somewhat more subdued. The prospect of inflation falling slightly below target for two consecutive years technically keeps the door open for a further rate cut. This argument should not be overstated, however – especially given that the projected undershoot of the 2-percent target in 2027 is only marginal. Attention will now turn to the first inflation forecast for 2028, due in December, which will be closely watched.

ECB President Christine Lagarde surprised markets by declaring the disinflationary trend over during the press conference following the monetary policy meeting. This effectively amounted to a pre-commitment against further rate cuts – at least for this year, the ECB appears unlikely to take further action. However, uncertainty regarding the overall economic outlook remains high. A final rate cut by the ECB as an "insurance measure" therefore remains an option. Potential triggers would be macroeconomic data worse than the ECB expects or a renewed escalation of the trade conflict. For instance, Trump's reaction to the fine imposed on Google by the European Commission demonstrates that the tariff agreement is not set in stone. It is quite possible that Lagarde may have overcommitted this time.

# Germany: Autumn blues for German companies

Analysts: Christian Lips, Chief Economist // Valentin Jansen

## Disturbing trend in foreign trade with China

The trend in German foreign trade with China is becoming increasingly disturbing. While Germany's overall exports stagnated between January and July 2025, remained broadly unchanged with 0.1 percent year-on-year growth, exports to China registered a severe decline: on a year-to-date basis, the volume of goods delivered to China fell by 13.8 percent. Germany's key industries were particularly affected, including the automotive industry, mechanical engineering, metal products, and the manufacture of electrical equipment. In contrast, imports from China rose significantly by 10.3 percent year-on-year over the same period. Imports of metal products, machinery and pharmaceutical products saw particularly strong growth.

Chart: Foreign trade with China – competition is becoming increasingly fierce and unfair

Sources: Destatis, Macrobond, NORD/LB Macro Research

## China's unfair trade practices pose a challenge for EU trade policy

A key factor behind the growing shift in Germany's trade dynamics with China is the loss of competitiveness, exacerbated by exchange rate effects. Chinese companies benefit from extensive state subsidies. Looking ahead, U.S. trade policy is likely to further aggravate China's overcapacity issues – resulting in more Chinese goods being diverted to European markets.

In addition, the yuan has weakened against the euro, giving Chinese exports an added price advantage. According to Germany's Cologne-based IW economic institute, Chinese competitors were already offering products last year at prices more than 30 percent below those of German suppliers. Such price disparities are increasingly leading companies in Germany and across Europe to replace domestic inputs with lower-cost imports from China in order to remain competitive.

The European Union's political leeway *within* the WTO framework is limited. While it is possible to take action against unfair trade practices, such procedures are protracted and subject to strict evidentiary requirements. Consequently, calls are growing in the EU to better protect the domestic market and industrial value chains from cheap imports – even if this means departing from multilateral trade rules. Reports suggest that protective tariffs on steel and aluminum, as well as a potential “Buy European” clause, are currently under discussion in Brussels.

The success of such protectionist industrial policies is by no means assured, however. Entailed risks include negative price effects, retaliatory measures, and a further escalation of trade tensions. On the other hand, Europe cannot stand by idly while other players increasingly flout the “common” rulebook

with their industrial and trade policies. In the end, any EU trade policy measures in the aforementioned direction would represent an act of self-defence aimed at reestablishing a level playing field.

### **Tariffs and fiscal package dilution dampen sentiment – hope for recovery in 2026**

Business sentiment among German companies suffered an unexpectedly sharp setback in September, with the ifo Business Climate Index falling for the first time since April to a current level of 87.7 points. The surveyed companies assessed both their future business expectations and the current situation more pessimistically, dealing a blow to hopes for a swift economic recovery.

The data suggest that the negative effects of U.S. tariff policy are gradually starting to have an impact. Many firms without significant direct business in the U.S. are also being indirectly affected – primarily due to intensified competitive pressure in other markets, particularly from Chinese imports. Moreover, disappointment over the implementation of the government's fiscal programme, along with low expectations in regard to the so-called "autumn of reforms", has likely added to the overall negative sentiment.

Expectations for interest rate cuts have not intensified despite the weaker sentiment data, since the current economic signals remain too mixed. Indeed, significant uncertainty remains around the underlying trend, as it is difficult to distinguish meaningful signals from market noise in the current environment. In September, the main sentiment indicators sent what were in some cases highly conflicting signals.

Nevertheless, the prospect of an economic recovery in the coming year remains intact from today's perspective. That said, there is a risk that the fiscal programme's implementation will fail to unlock its full potential for sustainable growth. The criterion of additionality in investments is particularly crucial for the long-term success of this fiscal policy shift. To achieve the maximum possible growth effect, policymakers would be well-advised to make decisive improvements to budget and investment planning, along with the accompanying measures. This would also very likely improve economic sentiment – a key prerequisite for a self-sustaining recovery.

# Switzerland: Now pharmaceuticals too?

Analyst: Christian Reuter

## Tariffs with isolated effects so far – full impact not yet felt

Despite external headwinds and elevated uncertainty, the Swiss economy has so far proven broadly resilient. Contributing factors include a stable labour market and low inflation, which is driving real income growth for households. In addition, the low-interest rate environment remains accommodative, underpinning corporate investment and the construction sector. Additionally, the rebound following the strong first quarter has evidently been less severe than feared. Exports to the U.S. have declined significantly, but gains in trade with other regions more than compensated for that. Indeed, exports registered real-term growth of 2.4 percent month on month in August. Notably, shipments to Canada surged 67 percent – a remarkable gain albeit from low baseline – which may indicate that tariffs can in fact be circumvented. Nevertheless, the situation is likely to deteriorate markedly in the quarters ahead. This is consistent with the news from the U.S. of a planned 100-percent tariff on pharmaceutical products protected by patents and trademarks. This unfolds a scenario that was previously considered a worst-case situation. Pharmaceuticals are the most important component of Swiss exports to the U.S. and represent a key sector for the Swiss economy as a whole. A recession now no longer seems out of the question. Much will depend on the extent to which the negative impulse from the directly affected sectors spreads to other parts of the economy. So far, the indirect effects have been surprisingly limited, a factor which had made for some degree of optimism lately. Furthermore, discussions are reportedly still ongoing between Bern and Washington, with the Swiss side hoping to get its tariff rate reduced from 39 percent to the EU's 15-percent level and secure an exemption for pharmaceutical products. Whether this is a realistic outcome remains to be seen.

## SNB demonstrates composure and keeps its powder dry

At its September meeting, the Swiss National Bank left its policy rate unchanged at 0.00 percent. The 0.25 percent interest surcharge on excess reserves held by banks that exceed 18 times their minimum reserve requirement likewise remains in place. The decision had been widely anticipated by both analysts and market participants. Throughout September, money markets had increasingly priced out the prospect of a negative policy rate, pushing expectations for such a move to the end of the first half of 2026. As regards the Swiss franc, the prevailing view solidified that while the currency is highly valued, the true phenomenon lies in the weakness of the US dollar. Indeed, since "Liberation Day," the dollar has depreciated against the franc similarly to its decline against other currencies, while the franc's exchange rate against the euro has remained roughly stable. Given that the euro is more important for Swiss exporters than the USD, this is a situation the SNB can tolerate. That said, the options to lower the policy rate below zero and to intervene in the FX market remain on the table. The central bank aims to buy time and assess the impact of tariffs on price levels.

# Japan: Waiting for the new prime minister

Analyst: Tobias Basse

## Waiting for the new prime minister

Prime Minister Shigeru Ishiba recently announced his resignation. Consequently, Japan, already facing considerable challenges, must now also contend with elevated political uncertainty. The name of the future head of government will not become known until early October. This decision by the ruling LDP party carries significant economic implications across a wide range of sectors – and will also be a pivotal moment for the central bank in Tokyo. Should the new prime minister not be overly "dovish", a cautious key-rate hike by the Bank of Japan is potentially to be reckoned with in October or December. Furthermore, the monetary policymakers in Tokyo will also need to keep a very close eye on the new government's fiscal plans. In this regard, the LDP's impending personnel decision is expected to be particularly consequential for future developments.

## Central bank remains under pressure to act

At its most recent monetary policy meeting the Bank of Japan once again held its monetary policy unchanged, as expected, so that the policy rate remains steady at just 0.50 percent. This decision by the central bankers in Tokyo was not unanimous, however. Indeed, two of the Policy Board's members, namely Hajime Takata and Naoki Tamura, voted in favour of a rate hike! Even more unexpected was the announcement of plans to gradually scale back the bank's holdings of ETFs and REITs. These intended sales are at any rate a clear signal of the Bank of Japan's fundamental desire to pursue a less expansively oriented monetary policy strategy in the future. As such, these plans can certainly be interpreted as an indication of impending key-rate hikes.

## Kazuo Ueda explains the recent decisions in more detail

At the press conference following the central bank meeting, Governor Kazuo Ueda discussed the plans for ETF sales in greater depth, emphasizing that the BoJ intends to proceed with a great deal of caution in this context. As regards the inflation developments in Japan, Ueda now anticipates a calming trend. He also highlighted the trade deal with Washington as a significant beacon of hope.

# China: Foreign trade loses traction

Analyst: Valentin Jansen

## Slowdown in exports, domestic market remains a particular concern

August saw China's export growth slow significantly. Overseas shipments rose by just 4.4 percent year-on-year, falling short of many analysts' expectations (July: 7.2 percent yoy). Exports to the United States in particular continued to decline sharply (-33.1 percent yoy), while deliveries to Southeast Asia (+22.5 percent) and Europe (+10.4 percent yoy) posted solid gains. Both the trend in key sales markets and the recent progress on the China-ASEAN Free Trade Agreement (CAFTA 3.0) highlight how Beijing is increasingly responding to shifting conditions in global trade by diversifying its commercial relationships. The domestic picture remains challenging on the inflation front. Consumer prices fell by 0.4 percent yoy in August, driven mainly by a steep drop in food prices (4.3 percent yoy). Core inflation edged up slightly to 0.9 percent yoy, suggesting tentative signs of stabilization, though overall demand remains weak. Producer prices remained in deflationary territory at -2.9 percent yoy, though the pace of decline eased somewhat compared with July. Overall, China's economic momentum remains subdued. While foreign trade remains a mainstay of the Chinese economy, the weakness in the domestic economy shows few signs of abating. Against this backdrop the central government continues to rely on targeted measures to bolster consumption and industry, though broader fiscal stimulus is not expected until the run-up to the Fourth Plenary Session of the 20th Central Committee of the Chinese Communist Party.

## Rapprochement between Washington and Beijing ahead of presidential meeting

The recent phone call between President Trump and President Xi served primarily as preparation for the planned presidential meeting at the APEC summit in late October. Both sides emphasized the constructive tone of the talks, though few concrete results were disclosed. The focus has shifted to stabilizing bilateral relations and laying the groundwork for further dialogue formats. Progress in the TikTok case has for some time been seen as a gauge of future cooperation between Washington and Beijing. This precedent illustrates the extent to which the two governments are in fact capable of reaching pragmatic solutions.

## PBOC expected to proceed cautiously with further easing

Despite ongoing concerns about the economy, the People's Bank of China once again left its key interest rate framework unchanged. Meanwhile, the recent rate cut by the Federal Reserve has, as expected, eased the pressure on the Chinese currency. With this in mind, the PBOC is likely to move cautiously with any further monetary easing over the remainder of the year, as exchange rate stability remains a top priority for Beijing. Expectations of additional Fed rate cuts, coupled with the PBOC's firm policy management, point to a stable to slightly stronger yuan in the months ahead.

# Britain: Waiting for new inflation data

Analysts: Tobias Basse // Constantin Lüer

## After the central bank meeting

At its last meeting the Bank of England's Monetary Policy Committee voted to hold the Bank Rate unchanged at 4 percent, at least for the time being. This rather unspectacular news came as no great surprise to the international financial markets. As a matter of fact, the current inflation environment left the central bank in London with virtually no real leeway for rate cuts. The decision, however, was not unanimous, with two dissenting votes.

## What happens next?

Two senior policymakers, Swati Dhingra and Alan Taylor, voted in favour of a "modest" 25 basis point rate cut. Compared to the highly turbulent August meeting, however, the most recent session seemed almost consensual. Nevertheless, there appear to be persistent concerns within the Bank of England regarding the UK's employment situation. Ultimately, the voting pattern of Dhingra and Taylor came as no great surprise, since neither are considered to be hawks. At the August meeting Taylor had, as is known, initially voted for a substantial 50 basis point cut before moderating his position to enable a reduction in the Bank Rate of at least 25 basis points.

## Waiting for new inflation data

The central bankers in London will now be looking to monitor the inflation trajectory very closely. In principle majorities in favour of cautious downward adjustments to the Bank Rate could still become possible under certain conditions. Once price data permit corresponding action, for example, further adjustments to the interest rate could well take place in London as well. In this context, the employment situation is, of course, likewise of significant importance. Should weaker data emerge from the labour market, the view currently championed by Swati Dhingra and Alan Taylor could quickly attract broader support. In short, the debate over interest rate cuts is far from over.

# Important legal framework conditions

This Information report (hereinafter referred to as “Material”) was drawn up by NORDDEUTSCHE LANDESBANK GIROZENTRALE („NORD/LB“). The supervisory authorities in charge of NORD/LB are the European Central Bank („ECB“), Sonnemannstraße 20, D-60314 Frankfurt am Main, and the Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht - „BaFin“), Graurheindorfer Str. 108, D-53117 Bonn, and Marie-Curie-Str. 24-28, D-60439 Frankfurt am Main. If this Material has been provided to you by your Sparkasse, this Sparkasse is also subject to supervision by BaFin and, if applicable, also by the ECB. Generally, this Material or the products or services described therein have not been reviewed or approved by the competent supervisory authority.

This Material is addressed exclusively to recipients in Australia, Austria, Belgium, Canada, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Indonesia, Ireland, Italy, Korea, Luxembourg, the Netherlands, New Zealand, Poland, Portugal, Singapore, Spain, Sweden, Switzerland, the Republic of China (Taiwan), Thailand, the United Kingdom and Vietnam (hereinafter the „Relevant Persons” or „Recipients”). The contents of this Material are disclosed to the Recipients on a strictly confidential basis and, by accepting this Material, the Recipients agree that they will not forward to third parties, copy in whole or in part or translate into other languages, and/or reproduce this Material without NORD/LB’s prior written consent. This Material is only addressed to the Relevant Persons and any persons other than the Relevant Persons must not rely on the information in this Material. In particular, neither this Material nor any copy thereof must be forwarded or transmitted to Japan or the United States of America or its territories or possessions or distributed to any employees or affiliates of Recipients resident in these jurisdictions.

This Material is not an investment recommendation/investment strategy recommendation, but customer information solely intended for general information purposes. For this reason, this Material has not been drawn up in consideration of all statutory requirements with regard to the impartiality of investment recommendations/investment strategy recommendations. Furthermore, this Material is not subject to the prohibition of trading before the publication of investment recommendations/investment strategy recommendations.

This Material has been compiled and are provided exclusively for information purposes. This Material is not intended as an investment incentive. It is provided for the Recipient’s personal information, subject to the express understanding, which is acknowledged by the Recipient, that it does not constitute any direct or indirect offer, recommendation, solicitation to purchase, hold or sell or to subscribe for or acquire any securities or other financial instruments nor any measure by which financial instruments might be offered or sold.

All actual details, information and statements contained herein were derived from sources considered reliable by NORD/LB. For the preparation of this Material NORD/LB uses issuer-specific financial data providers, own estimates, company information and public media. However, since these sources are not verified independently, NORD/LB cannot give any assurance as to or assume responsibility for the accuracy and completeness of the information contained herein. The opinions and prognoses given herein on the basis of these sources constitute a non-binding evaluation of NORD/LB. Any changes in the underlying premises may have a material impact on the developments described herein. Neither NORD/LB nor its governing bodies or employees can give any assurance as to or assume any responsibility or liability for the accuracy, adequacy and completeness of this Material or any loss of return, any indirect, consequential or other damage which may be suffered by persons relying on the Material or any statements or opinions set forth in this Material (irrespective of whether such losses are incurred due to any negligence on the part of these persons or otherwise).

Past performances are not a reliable indicator of future performances. Exchange rates, price fluctuations of the financial instruments and similar factors may have a negative impact on the value and price of and return on the financial instruments referred to herein or any instruments linked thereto. In connection with securities (purchase, sell, custody) fees and commissions apply, which reduce the return on investment. An evaluation made on the basis of the historical performance of any security does not necessarily give an indication of its future performance.

Also this Material as a whole or any part thereof is not a sales or other prospectus. Correspondingly, the information contained herein merely constitutes an overview and does not form the basis for an investor’s potential decision to buy or sell. A full description of the details relating to the financial instruments or transactions, which may relate to the subject matter of this Material is set forth in the relevant (financing) documentation. To the extent that the financial instruments described herein are NORD/LB’s own issues and subject to the requirement to publish a prospectus, the conditions of issue applicable to any individual financial instrument and the relevant prospectus published with respect thereto as well NORD/LB’s relevant registration form, all of which are available for downloading at [www.nordlb.de](http://www.nordlb.de) and may be obtained, free of charge, from NORD/LB, Friedrichswall 10, 30159 Hanover, shall be solely binding. Any potential investment decision should at any rate be made exclusively on the basis of such (financing) documentation. This Material cannot replace personal advice. Before making an investment decision, each Recipient should consult an independent investment adviser for individual investment advice with respect to the appropriateness of an investment in financial instruments or investment strategies as contemplated herein as well as for other and more recent information on certain investment opportunities.

Each of the financial instruments referred to herein may involve substantial risks, including capital, interest, index, currency and credit risks, political, fair value, commodity and market risks. The financial instruments could experience a sudden substantial deterioration in value, including a total loss of the capital invested. Each transaction should only be entered into on the basis of the relevant investor’s assessment of its individual financial situation as well as of the suitability and risks of the investment.

The information set forth in this Material shall supersede all previous versions of any relevant information and refer exclusively to the date as of which this Material has been drawn up. Any future versions of this Material shall supersede this present version. NORD/LB shall not be under any obligation to update and/or review this Material at regular intervals. Therefore, no assurance can be given as to its currentness and continued accuracy.

By making use of this Material, the Recipient shall accept the foregoing terms and conditions.

NORD/LB is a member of the protection scheme of Deutsche Sparkassen-Finanzgruppe. Further information for the Recipient is set forth in clause 28 of the General Terms and Conditions of NORD/LB or at [www.dsgv.de/sicherungssystem](http://www.dsgv.de/sicherungssystem).

## Additional information for recipients in Australia

NORD/LB IS NOT A BANK OR AN AUTHORISED DEPOSIT TAKING INSTITUTION AUTHORISED UNDER THE BANKING ACT 1959 OF AUSTRALIA. IT IS NOT REGULATED BY THE AUSTRALIAN PRUDENTIAL REGULATION AUTHORITY.

NORD/LB is not providing personal advice with this Material, and has not considered one or more of the recipient’s objectives, financial situation and need (other than for anti-money laundering purposes).

## Additional information for recipients in Austria

None of the information contained in this Material constitutes a solicitation or offer by NORD/LB or its affiliates to buy or sell any securities, futures, options or other financial instruments or to participate in any other strategy. Only the published prospectus pursuant to the Austrian Capital Market Act should be the basis for any investment decision of the Recipient.

For regulatory reasons, products mentioned in this Material may not be being offered into Austria and are not available to investors in Austria. Therefore, NORD/LB might not be able to sell or issue these products, nor shall it accept any request to sell or issues these products, to investors located in Austria or to intermediaries acting on behalf of any such investors.

## Additional information for recipients in Belgium

Evaluations of individual financial instruments on the basis of past performance are not necessarily indicative of future results. It should be noted that the reported figures relate to past years.

## Additional information for recipients in Canada

This Material has been prepared solely for information purposes in connection with the products it describes and should not, under any circumstances, be construed as a public offer or any other offer (direct or indirect) to buy or sell securities in any province or territory of Canada. No financial market authority or similar regulatory body in Canada has made any assessment of these securities or reviewed this Material and any statement to the contrary constitutes an offence. Potential selling restrictions may be included in the prospectus or other documentation relating to the relevant product.

## Additional information for recipients in Cyprus

This Material constitutes an analysis within the meaning of the definition section of the Cyprus Directive D1444-2007-01(No 426/07). Furthermore, this Material is provided for informational and advertising purposes only and does not constitute an invitation or offer to sell or buy or subscribe any investment product.

## Additional information for recipients in Czech Republic

There is no guarantee to get back the invested amount. Past performance is no guarantee of future results. The value of investments could go up and down.

The information contained in this Material is provided on a non-reliance basis and its author does not accept any responsibility for its content in terms of correctness, accuracy or otherwise.

## Additional information for recipients in Denmark

This Material does not constitute a prospectus under Danish securities law and consequently is not required to be nor has been filed with or approved by the Danish Financial Supervisory Authority as this Material either (i) has not been prepared in the context of a public offering of securities in Denmark or the admission of securities to trading on a regulated market within the meaning of the Danish Securities Trading Act or any executive orders issued pursuant thereto, or (ii) has been prepared in the context of a public offering of securities in Denmark or the admission of securities to trading on a regulated market in reliance on one or more of the exemptions from the requirement to prepare and publish a prospectus in the Danish Securities Trading Act or any executive orders issued pursuant thereto.

## Additional information for recipients in Estonia

It is advisable to examine all the terms and conditions of the services provided by NORD/LB. If necessary, Recipient of this Material should consult with an expert.

## Additional information for recipients in Finland

The financial products described in this Material may not be offered or sold, directly or indirectly, to any resident of the Republic of Finland or in the Republic of Finland, except pursuant to applicable Finnish laws and regulations. Specifically, in the case of shares, those shares may not be offered or sold, directly or indirectly, to the public in the Republic of Finland as defined in the Finnish Securities Market Act (746/2012, as amended). The value of investments may go up or down. There is no guarantee to get back the invested amount. Past performance is no guarantee of future results.

## Additional information for recipients in France

NORD/LB is partially regulated by the Autorité des Marchés Financiers for the conduct of French business. Details about the extent of our regulation by the respective authorities are available from us on request.

This Material constitutes an analysis within the meaning of Article 24(1) Directive 2006/73/EC, Article L544-1 and R.621-30-1 of the French Monetary and Financial Code and does qualify as recommendation under Directive 2003/6/EC and Directive 2003/125/EC.

## Additional information for recipients in Greece

The information herein contained describes the view of the author at the time of its publication and it must not be used by its Recipient unless having first confirmed that it remains accurate and up to date at the time of its use.

Past performance, simulations or forecasts are therefore not a reliable indicator of future results. Mutual funds have no guaranteed performance and past returns do not guarantee future performance.

## Additional information for recipients in Indonesia

This Material contains generic information and has not been tailored to certain Recipient’s specific circumstances. This Material is part of NORD/LB’s marketing materials.

**Additional information for recipients in Ireland**

This Material has not been prepared in accordance with Directive 2003/71/EC, as amended, on prospectuses (the "Prospectus Directive") or any measures made under the Prospectus Directive or the laws of any Member State or EEA treaty adherent state that implement the Prospectus Directive or those measures and therefore may not contain all the information required where a document is prepared pursuant to the Prospectus Directive or those laws.

**Additional information for recipients in Korea**

This Material has been provided to you without charge for your convenience only. All information contained in this Material is factual information and does not reflect any opinion or judgement of NORD/LB. The Material contained in this Material should not be construed as an offer, marketing, solicitation or investment advice with respect to financial investment products in this Material.

**Additional information for recipients in Luxembourg**

Under no circumstances shall this Material constitute an offer to sell, or issue or the solicitation of an offer to buy or subscribe for Products or Services in Luxembourg.

**Additional information for recipients in New Zealand**

NORD/LB is not a registered Bank in New Zealand. This Material is general information only. It does not take into account your financial situation or goals and is not a personalized financial adviser service under the Financial Advisers Act 2008.

**Additional information for recipients in Netherlands**

The value of your investments may fluctuate. Results achieved in the past do not offer any guarantee for the future (De waarde van uw belegging kan fluctueren. In het verleden behaalde resultaten bieden geen garantie voor de toekomst).

**Additional information for recipients in Poland**

This Material does not constitute a recommendation within the meaning of the Regulation of the Polish Minister of Finance Regarding Information Constituting Recommendations Concerning Financial Instruments or Issuers thereof dated 19 October 2005.

**Additional information for recipients in Portugal**

This Material is intended only for institutional clients and may not be (i) used by, (ii) copied by any means or (iii) distributed to any other kind of investor, in particular not to retail clients. This Material does not constitute or form part of an offer to buy or sell any of the securities covered by the report nor can be understood as a request to buy or sell securities where that practice may be deemed unlawful. This Material is based on information obtained from sources which we believe to be reliable, but is not guaranteed as to accuracy or completeness. Unless otherwise stated, all views herein contained are solely expression of our research and analysis and subject to change without notice.

**Additional information for recipients in Singapore**

This Material is intended only for Accredited Investors or Institutional Investors as defined under the Securities and Futures Act in Singapore. If you have any queries, please contact your respective financial adviser in Singapore.

This Material is intended for general circulation only. It does not constitute investment recommendation and does not take into account the specific investment objectives, financial situation or particular needs of the Recipient. Advice should be sought from a financial adviser regarding the suitability of the investment product, taking into account the specific investment objectives, financial situation or particular needs of the Recipient, before the Recipient makes a commitment to purchase the investment product.

**Additional information for recipients in Sweden**

This Material does not constitute or form part of, and should not be construed as a prospectus or offering memorandum or an offer or invitation to acquire, sell, subscribe for or otherwise trade in shares, subscription rights or other securities nor shall it or any part of it form the basis of or be relied on in connection with any contract or commitment whatsoever. This Material has not been approved by any regulatory authority. Any offer of securities will only be made pursuant to an applicable prospectus exemption under EC Prospectus Directive, and no offer of securities is being directed to any person or investor in any jurisdiction where such action is wholly or partially subject to legal restrictions or where such action would require additional prospectuses, other offer documentation, registrations or other actions.

**Additional information for recipients in Switzerland**

This Material has not been approved by the Federal Banking Commission (merged into the Swiss Financial Market Supervisory Authority "FINMA" on 1 January 2009).

NORD/LB will comply with the Directives of the Swiss Bankers Association on the Independence of Financial Research, as amended.

This Material does not constitute an issuing prospectus pursuant to article 652a or article 1156 of the Swiss Code of Obligations. This Material is published solely for the purpose of information on the products mentioned in this Material. The products do not qualify as units of a collective investment scheme pursuant to the Federal Act on Collective Investment Schemes (CISA) and are therefore not subject to the supervision by the Swiss Financial Market Supervisory Authority (FINMA).

**Additional information for recipients in the Republic of China (Taiwan)**

This Material is provided for general information only and does not take into account any investor's particular needs, financial status, or investment objectives. Nothing in this Material should be construed as a recommendation or advice for you to subscribe to a particular investment product. You should not rely solely on the Material provided when making your investment decisions. When considering any investment, you should endeavour to make your own independent assessment and determination on whether the investment is suitable for your needs and seek your own professional financial and legal advice.

NORD/LB has taken all reasonable care in producing this Material and trusts that the information is reliable and suitable for your situation at the date of publication or delivery, but no representation or warranty of accuracy or completeness is given. To the extent that NORD/LB has exercised the due care of a good administrator, we accept no responsibility for any errors, omissions, or misstatements in this Material. NORD/LB does not guarantee any investment results and does not guarantee that the strategies employed will improve investment performance or achieve your investment objectives.

**Additional information for recipients in the UK**

NORD/LB is subject to limited regulation by the Financial Conduct Authority ("FCA") and the Prudential Regulation Authority ("PRA"). Details about the extent of our regulation by the FCA and PRA are available from NORD/LB on request.

This Material is a financial promotion. Relevant Persons in the UK should contact NORD/LB's London Branch, Investment Banking Department, Telephone: 0044 / 2079725400 with any queries.

Investing in financial instruments referred to in this Material may expose an investor to a significant risk of losing all of the amount invested.
